

LED Indoor Luminaires Ceiling Mount w/Battery Backup 120-277VAC / 60Hz

Model # C2FxxL5AJUDWH-BB

Safety Precautions

- Read all safety precautions and installation instructions carefully before installing or servicing this fixture. Failure to comply with these instructions could result in potentially fatal electric shock and/or property damage.
- It is recommended that a qualified electrician perform all the wiring. This fixture must be wired in accordance with all national and local electrical codes.
- Do not handle any energized fixture or attempt to energize any fixture with wet hands or while standing on a wet or damp surface or in water.
- This fixture is designed for use in a 120-277VAC / 60Hz fused circuit. This fixture is compatible with Triac (forward-phase or leading edge) / ELV (reverse phase or trailing edge) and 0-10V dimming circuit.
- Make sure that the power source conforms to the requirements of the fixture. (See labels on the fixture housing).
- To reduce the risk of electrical shock, and to assure proper operation, this fixture must be adequately grounded. To accomplish proper grounding, there must be a separate ground wire (green) contact between this fixture and the ground connection of your main power supply panel.
- This fixture is intended to be used for general indoor lighting in dry or damp locations.
- Disclaimer

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules and Canadian ICES-005 (B) / NMB-005 (B). These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiver antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult with the dealer or an experienced radio/TV technician for help.

Any modifications to this fixture may void the warranty and interfere with the safe operation of the luminaire.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Assembly Instructions

Step 1 – Preparing for installation

- Disconnect electrical power** at the fuse or circuit breaker box before installing or servicing any part of this fixture.
- Remove fixture and hardware kit from the carton.
- Remove components from the hardware kit.
- Place the diffuser (6) off to the side.
- Connect battery pack (4) to battery driver (3) per Figure 1. Ensure connectors are fully mated before moving to next step. Note: Lights may turn on during installation depending on the battery state of charge. This is normal for fixture to be on when battery is charged and during installation.

Wiring – All wiring must take place inside the junction box (not included)

Caution: Make sure power is off at the fuse or circuit breaker box. Check power wires for damage or scrapes. If the power supply wires are within three inches of the LED driver, use a wire suitable for at least 90°C (194°F).
Note: Most dwellings built before 1985 have supply wire rated to 60°C. Consult a qualified electrician to ensure correct branch circuit conductor before installing.

Step 2 – Wiring fixture

- Make all wire connections to appropriate wire. Secure with wire nuts (provided).
- Connect the green wire from the fixture to the supply power source ground wire.
- For non-dimming.** Connect the white wire from the fixture to the white (N) wire from the wall switch supply power source. Connect the black wire from the fixture to the black (L) wire from the wall switch supply power source. Pink and purple wires are not to be used and must be individually capped to prevent shorting.
- For TRIAC dimming.** Connect the white wire from the fixture to corresponding neutral (N) wire in accordance with the dimmer manufacturer instructions. Connect the black wire from the fixture to the corresponding control line (L) wire in accordance with the dimmer manufacturer instructions. Pink and purple wires are not to be used and must be individually capped to prevent shorting.
- For 0-10V dimming.** Connect the pink wire from the fixture to the dimmer source gray or pink wire. Connect the purple wire from the fixture to the dimmer source purple wire. Connect the white wire from the fixture to the neutral (N) wire from the dimming supply power source per dimmer wiring instructions. Connect the black wire from the fixture to the control line (L) wire from the dimmer supply power source per dimmer wiring instructions.
- Battery wire:** Connect White/Black stripe wire battery driver AC to the White (N) wire going to LED driver White (N) wire. Connect White (N) wire from battery driver AC to the White (N) wire from continuous supply power source. Connect Black wire from battery driver AC to the Black (L) wire from continuous supply power source.
- Do not mix wires.** Pull on each wire lead to make sure connections are secure. Make certain no bare wires are exposed outside of wire connectors. Tuck all connections neatly into junction box.

Step 3 – Mounting fixture

- Install fixture with battery (1) to the ceiling by aligning key holes to the 3-0 or 4-0 junction box (not included) using two screws (2) to secure it.

Step 4 – Color Changing Temperature Adjustment, CCT (if desired)

- Adjust CCT switch accordingly to the desired color temperature as seen below. **Note:** Fixture is preset to 3000K from factory. Power to the fixture must always be turned OFF prior to adjusting the CCT switch.

• 2700K
• 3000K
• 3500K
• 4000K
• 5000K

Step 5 – Install diffuser

- Install diffuser (6) to the fixture by aligning three notches with screws (5) then slightly quarter turn clockwise to secure it. Note: tighten three screws afterwards.

Step 6 – Restore power at the fuse or circuit breaker box

Note (1): a dual wattage switch can be adjusted for low or high power output to increase or decrease fixture lumens respectively. This feature is only available on the 14" model. Power to the fixture must always be turned OFF prior to adjusting the wattage switch.

Note (2): The battery contained in the backup system requires luminaire installation within three months of purchase. If the battery backup system has not been installed during this period, there is a possibility the battery may discharge and not operate.

Note (3): Battery operational guide. The red LED on the side of battery housing is an indicator for AC power status; Off receive No AC power, On receive AC power. Testing battery condition regularly twice a year by pressing on the test switch button to check battery power cell charge status. The red LED will "Turn On" upon pressing the test switch button which temporarily disconnect AC power and activate battery power cell. The fixture will remain lit during this testing period that indicates battery is discharging as intended. In the event there is no AC power or black out situation, fixture will remain lit for 90mins and gradually diminishing to off as battery power is depleted.

Limited Factory Warranty

AFX Inc. hereby warranty that this fixture is free from defects in materials and workmanship when installed and used under normal operating conditions for a period of 5 years from date of shipment from factory. This warranty covers all component parts and extends only to replacement of defective fixture or components; it does not cover failure due to improper installation, misuse, mishandling or damage incurred in transit.
